Prof. Cao's major research interests include innovative manufacturing processes and systems, particularly in the areas of deformation-based processes and laser processes. Her work has made fundamental contributions to the characterization of the effects of material structure on forming behavior of metals and woven composites. Her research has integrated analytical and numerical simulation methods, control and sensors, design methodologies to advance manufacturing processes. Prof. Cao's research group has designed unique manufacturing equipment for microforming, dieless sheet forming, and additive manufacturing. Current research has direct impacts on energy-efficient manufacturing, surface engineering, and distributed manufacturing. Prof. Cao has published over 300 technical articles, including more than 175 journal articles, 10 book chapters, and 15 patents. She has given more than 130 invited talks.

Prof. Cao's research contributions have been recognized extensively by her peers in the fields of manufacturing, applied mechanics and control. She is a Fellow of the *International Academy for Production Engineering (CIRP)*, the *Society of Manufacturing Engineers (SME)*, and the *American Society of Mechanical Engineers (ASME)*. Her major awards include the ASME and Pi Tau Sigma Charles Russ Richards Memorial Award; the SME Frederick W. Taylor Research Medal, the ASME literature award, the Blackall Machine Tool and Gage Award; the ASME/AMD Young Investigator Award; and the NSF Early CAREER award. Prof. Cao was the founding Technical Editor of the ASME *Journal of Micro- and Nano-manufacturing*. In 2012, she was selected to be the panelist representing the field of manufacturing in the World Technology Evaluation (WTEC) study on Societal Convergence for Human Progress: Beyond Convergence of Nano-Bio-Info-Cognitive Technologies, sponsored by NSF, NIH, NASA, EPA, DoD, and DoA.

Prof. Cao has been active on national and international stages. She served as the Program Director of Materials Processing and Manufacturing (MPM) program at NSF from 2003 to 2005. During that short two-year period, under her leadership, the WTEC Study on Micro-manufacturing was conducted and co-sponsored by four government agencies and more than ten NSF programs. She co-initiated the joint-funding between NSF and DOE for her MPM program. Through collaboration with other programs, she was able to increase funding for her program by over 20%. She is one of the main driving forces behind the well-received NSF workshops on CAREER development. Prof. Cao has served as President of North American Manufacturing Research Institute of SME and Chair of ASME Manufacturing Engineering Division. She has chaired multiple ASME committees, including the M. Eugene Merchant Medal Committee and Committee of Administration and Finance. She was awarded the ASME Dedicated Service Award. She is the Chair of the Scientific and Technical Committee on Forming and the Vice-Chair of the Working Group on Additive Manufacturing of *CIRP*. Prof. Cao is a Board member of mHUB, the Chicago-based incubator for physical-based startups.

As Associate Vice President for Research at Northwestern University, Prof. Cao oversaw the unit that administers the university's core facilities. Working with faculty, staff and leadership at schools and the university, she successfully launched new funding models for key scientific instruments and software, and led initiatives for strengthening major supporting units, such as machine shop, electronics shop and clean rooms. Several University Research Centers now report to her, primarily in the physical sciences and engineering. Prof. Cao helps with collaboration between the physical sciences and engineering, as well as with other disciplines across and beyond NU. She is the founding director of the Northwestern Initiative for Manufacturing Science and Innovation, aiming to undertake multi-disciplinary research and education initiatives associated with the broad spectrum of manufacturing related both to computational design and manufacturing and to emerging hyper-customized and personalized manufacturing. Cao is a member of the Technical Advisory Board of the National Manufacturing Institute's Digital Manufacturing and Design Innovation Institute (DMDII).
